NOTES:

CAV-AIR-ATOR PRODUCT DESCRIPTION:

The CAV-AIR-ATOR™ is a full wall drainage and ventilation mat for full brick or stone masonry walls. It prevents mortar from entering the cavity, clinging to wall ties, or blocking weep holes. The innovative design of the CAV-AIR-ATOR™ allows it to be extremely light and flexible so that it can easily rest on top of the brick ties. The CAV-AIR-ATOR™ is made up of an extruded polymer matrix of entangled monofilaments that form block-shaped channels. In masonry walls, it leaves 96.5% of the cavity unobstructed and free to breathe. A lightweight filtered fabric is laminated on one side of the product to prevent mortar from entering the cavity while still allowing for enough finger room to lay the brick. The extremely high airflow and lack of mortar intrusion allows for efficient liquid moisture drainage and uniform airflow in all directions. It comes in thicknesses of ¼", ½", ¾", and 1" to fill the desired thickness of the wall cavity.

APPLICATIONS: BRICK AND STONE MASONRY
